

```
-- Imported excel data in oracle database by first create a table
--same table structure and then importing the data from excel to

--1. Create table
create table wiom
( id NUMBER(7),
added_time date,
rating number(1),
ratable VARCHAR2(11),
ratable_id number(7),
remarks varchar2(70) ,
isp_name varchar2(4)
);

--2. Select all from table
select * from wiom;

--delete from wiom;

--alter table wiom
--MODIFY isp_name varchar(16);

--3. Checking whether all rows are imported correctly or not
select count(*) from wiom;

--4. Maximum rating of which isp

select isp_name , count(rating) from wiom
GROUP by isp_name
order by count(rating) desc;

--5. Isp with best ratings and great performance.
```

```
where rating=5
GROUP by isp_name
order by count(rating) desc
OFFSET 0 ROW FETCH NEXT 1 ROW ONLY;
```

--6. Total error remarks we got from the users

```
select count(remarks) from wiom
where remarks is not null;
```
